#### Qualitative Disclosures:

In accordance with the guidelines of RBI, the bank has adopted standardized approach for credit risk, basic indicator approach for operational risk and standardised duration approach for market risk for computing capital adequacy. Basel III Capital regulations are applicable to Banks in India from 1st April, 2013 and will be fully phased in by 31st March, 2018. Detailed guidelines on Basel III Capital Regulations and Guidelines on Composition of Capital Disclosure Requirements are issued by RBI and consolidated under the Master Circular – Basel III Capital Regulations July 2013.

The transitional arrangements for minimum Basel III capital ratios are given below.

Regulatory Capital Adequacy position (as per Basel II & Basel III norms as made applicable by RBI) is assessed periodically. Besides, the bank also assessed its own internal estimate of risk capital based on its Board approved ICAAP policy and Stress Testing Policy to cover the Pillar 2 risks. Risks are assumed in line with the Bank's risk bearing capacity and capability in order to generate yields, taking risk-return frontier into account. This aims to ensure that risks that could jeopardize the Bank's existence are avoided.

<sup>#</sup> The same transition approach will apply to deductions from Additional Fier 1 and Fier 2 capital.

#### 6. Credit Risk Mitigation: Disclosures for standardised approaches

#### **Qualitative Disclosures**

A Credit Risk Mitigation and Collateral Management Policy, addressing the Bank's approach towards the credit risk mitigants used for capital calculation is in place.

Following items are considered for on and off balance sheet netting:

- a) Deposits with specific lien to the facility
- b) Subsidies received (for priority sector advances)
- c) Claims received (for NPA accounts)

Of the eligible financial collaterals, the types of collateral taken by the bank are gold ornaments and bank's own deposit receipts. Gold ornaments are accepted as collateral by branches after due scrutiny and are marked to market value on a daily basis. Bank has made an assessment of market liquidity risk involved in liquidating gold ornaments and is considering a holding period of 21 days for advance against pledge of gold ornaments. In Pillar 1 capital adequacy computations, bank considers a haircut of 22% (after scaling up the standard supervisory haircut of 15% to a 21 day holding period). In addition to this, bank is maintaining extra capital for its gold loan portfolio in Pillar 2 capital computations.

The types of guarantees recognized for credit risk mitigation are guarantee by central government, state government, ECGC and banks (in the form of bills purchased/discounted under Letter of credit).

Collaterals other than financial collaterals that secure the credit portfolio of the bank are land & building, plant & machinery and current assets of the counter party. Land and Building includes commercial building, residential property and vacant land.

The Executive level committee - Operational Risk Management Committee (ORMC) which reports to Risk Management Committee (RMC) of the Board, is responsible for the management and mitigation of operational risk in the bank. The bank has framed Operational Risk Management Policy duly approved by the Board. Other policies approved by the board that deal with the different facets of operational risk are Inspection Policy, Human Resource Management Policy, IT Policy, Compliance Policy, Business Continuity & Disaster Recovery Plan and Outsourcing policy.

#### *Qualitative Disclosures*

The Executive Level Committee - Asset Liability Committee (ALCO) has the overall responsibility of managing the interest rate risk in the banking book of the bank. ALCO fixes the deposit and lending rates of the bank and directs the investment activities of the bank in line with its interest rate view. Limits are fixed from both Earnings and Economic Value Perspective in board approved Market Risk Management Policy and adherence monitored on a monthly basis. Interest Rate Risk from Earnings Perspective is measured through Earnings at Risk (EaR) approach (which computes the impact on NII of various interest rate changes) on a monthly basis. Interest Rate Risk from Economic Value Perspective is measured using Modified Duration Gap Approach on a monthly basis.

The Risk Management Committee of the Board oversees the ALM process of the bank and reviews the decisions taken by the ALCO.

#### Key Assumptions for IRRB calculations

- a) Bulk of the advance portfolio to reprice within 12 months.
- b) Maturity of deposits considered after adjusting empirically observed premature closure rates.
- c) Core portion of Savings Bank Deposits slotted in 7 to 10 year time bucket.
- d) Core portion of Current Deposits slotted in Above 15 years time bucket for Modified Duration Gap Analysis (For Earnings at Risk Analysis, Current Deposits are treated as interest non sensitive).

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before final settlement of the transaction's cash flows. An economic loss would occur if the transaction or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement in underlying market factors.

Capital is maintained on the exposure to CCR as per regulatory guidelines on Capital adequacy computation. The exposure is calculated using Current Exposure Method.

The MTM on client exposures are monitored periodically. The Bank does not recognize bilateral netting for capital computation.
