6. Credit Risk Mitigation: Disclosures for standardised approaches

Qualitative Disclosures

A Credit Risk Mitigation and Collateral Management Policy, addressing the Bank's approach towards the credit risk mitigants used for capital calculation is in place.

Following items are considered for on and off balance sheet netting:

- a) Deposits with specific lien to the facility
- b) Subsidies received (for priority sector advances)
- c) Claims received (for NPA accounts)

Of the eligible financial collaterals, the types of collateral taken by the bank are gold ornaments and bank's own deposit receipts. Gold ornaments are accepted as collateral by branches after due scrutiny and are marked to market value on a daily basis. Bank has made an assessment of market liquidity risk involved in liquidating gold ornaments and is considering a holding period of 21 days for advance against pledge of gold ornaments. In Pillar 1 capital adequacy computations, bank considers a haircut of 22% (after scaling up the standard supervisory haircut of 15% to a 21 day holding period). In addition to this, bank is maintaining extra capital for its gold loan portfolio in Pillar 2 capital computations.

The types of guarantees recognized for credit risk mitigation are guarantee by central government, state government, ECGC and banks (in the form of bills purchased/discounted under Letter of credit).

Collaterals other than financial collaterals that secure the credit portfolio of the bank are land & building, plant & machinery and current assets of the counter party. Land and Building includes commercial building, residential property and vacant land.

11. Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before final settlement of the transaction's cash flows. An economic loss would occur if the transaction or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement in underlying market factors.

Capital is maintained on the exposure to CCR as per regulatory guidelines on Capital adequacy computation. The exposure is calculated using Current Exposure Method.

The MTM on client exposures are monitored periodically. The Bank does not recognize bilateral netting for capital computation.

Leverage Ratio frame work

Definition and minimum requirement

The Basel III leverage ratio is defined as the capital measure (the numerator) divided by the exposure measure (the denominator), with this ratio expressed as a percentage

Leverage Ratio = Capital Measure/ Exposure Measure

The public disclosure requirements of leverage ratio will begin from January 1, 2015 and the Basel Committee will monitor the impact of these disclosure requirements. Accordingly, banks operating in India are required to make disclosure of the leverage ratio and its components from April 1, 2015 on a quarterly basis and according to the disclosure templates as indicated in paragraph 16.7 along with Pillar 3 disclosures.

Disclosure templates
