Regulatory Capital Adequacy position (as per Basel II & Basel III norms as made applicable by RBI) is assessed periodically. Besides, the bank also assessed its own internal estimate of risk capital based on its Board approved ICAAP policy and Stress Testing Policy to cover the Pillar 2 risks. 6. Credit Risk Mitigation: Disclosures for standardised approaches**Qualitative Disclosures**

A Credit Risk Mitigation and Collateral Management Policy, addressing the Bank's approach towards the credit risk mitigants used for capital calculation is in place.

Following items are considered for on and off balance sheet netting:

- Deposits with specific lien to the facility
- Subsidies received (for priority sector advances)
- Claims received (for NPA accounts)

Of the eligible financial collaterals, the types of collateral taken by the bank are gold ornaments and bank's own deposit receipts. Gold ornaments are accepted as collateral by branches after due scrutiny and are marked to market value on a daily basis. Bank has made an assessment of market liquidity risk involved in liquidating gold ornaments and is considering a holding period of 21 days for advance against pledge of gold ornaments. In Pillar 1 capital adequacy computations, bank considers a haircut of 22% (after scaling up

the standard supervisory haircut of 15% to a 21 day holding period). In addition to this, bank is maintaining extra capital for its gold loan portfolio in Pillar 2 capital computations.

The types of guarantees recognized for credit risk mitigation are guarantee by central government, state government, ECGC and banks (in the form of bills purchased/discounted under Letter of credit).

Collaterals other than financial collaterals that secure the credit portfolio of the bank are land & building, plant & machinery and current assets of the counter party. Land and Building includes commercial building, residential property and vacant land.

8. Market Risk in the Trading Book

Qualitative Exposures

Bank has put in place Board approved Market Risk Management Policy, Investment Policy and Foreign Exchange Policy for effective management of market risk of the bank.

Bank's Integrated Treasury manages the trading book. Proprietary trading is done in government securities, equity shares and foreign exchange. Adherence to limits is reported on a monthly basis to the Executive level Asset Liability Committee (ALCO) and Risk Management Committee (RMC) of the Board.

Modified Duration and Value at Risk (weighted historic simulation approach) are the tools used to track market risk in the trading book for interest rate related instruments. For equity exposures bank uses Value at Risk and Portfolio Beta.

Stress tests are conducted on a daily basis on securities in the trading book.

Portfolios covered by standardised approach are government securities, other trustee securities, Non SLR bonds & debentures, Certificate of Deposits and Equity Shares.

9. Operational Risk

Qualitative Disclosures

The Executive level committee - Operational Risk Management Committee (ORMC) which reports to Risk Management Committee (RMC) of the Board, is responsible for the management and mitigation of operational risk in the bank. The bank has framed Operational Risk Management Policy duly approved by the Board. Other policies approved by the board that deal with the different facets of operational risk are Inspection Policy, Human Resource Management Policy, IT Policy, Compliance Policy, Business Continuity & Disaster Recovery Plan and Outsourcing policy.

Bank has obtained Bankers' Indemnity Policy to cover the risk of cash in transit and cash and securities including gold ornaments kept at branches. Risk Based Internal Audit (RBIA) is operational at all the branches.

Bank is adopting Basic Indicator Approach for arriving at capital charge for operational risk in compliance with RBI guidelines and is in the process of building database for moving to Advanced Approaches.

10. Interest Rate Risk in the Banking Book

Qualitative Disclosures

The Executive Level Committee - Asset Liability Committee (ALCO) has the overall responsibility of managing the interest rate risk in the banking book of the bank. ALCO fixes the deposit and lending rates of the bank and directs the investment activities of the bank in line with its interest rate view. Limits are fixed from both Earnings and Economic Value Perspective in board approved Market Risk Management Policy and adherence monitored on a monthly basis. Interest Rate Risk from Earnings Perspective is measured through Earnings at Risk (EaR) approach (which computes the impact on NII of various interest rate

changes) on a monthly basis. Interest Rate Risk from Economic Value Perspective is measured using Modified Duration Gap Approach on a monthly basis.

The Risk Management Committee of the Board oversees the ALM process of the bank and reviews the decisions taken by the ALCO.

Key Assumptions for IRRB calculations

- a) Bulk of the advance portfolio to reprice within 12 months.
- b) Maturity of deposits considered after adjusting empirically observed premature closure rates.
- c) Core portion of Savings Bank Deposits slotted in 7 to 10 year time bucket.
- d) Core portion of Current Deposits slotted in 10 to 15 years time bucket for Modified Duration Gap Analysis (For Earnings at Risk Analysis, Current Deposits are treated as interest non sensitive).

11. Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before final settlement of the transaction's cash flows. An economic loss would occur if the transaction or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different

types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement in underlying market factors.

Capital is maintained on the exposure to CCR as per regulatory guidelines on Capital adequacy computation. The exposure is calculated using Current Exposure Method.

The MTM on client exposures are monitored periodically. The Bank does not recognize bilateral netting for capital computation.

Leverage Ratio frame work

Definition and minimum requirement

The Basel III leverage ratio is defined as the capital measure (the numerator) divided by the exposure measure (the denominator), with this ratio expressed as a percentage

Leverage Ratio = Capital Measure / Exposure Measure

The public disclosure requirements of leverage ratio will begin from January 1, 2015 and the Basel Committee will monitor the impact of these disclosure requirements. Accordingly, banks operating in India are required to make disclosure of the leverage ratio and its components from April 1, 2015 on a quarterly basis and according to the disclosure templates as indicated in paragraph 16.7 along with Pillar 3 disclosures.
